

Functional Ecology

Editorial Office contact: Jennifer Meyer, Assistant Editor (admin@functionalecology.org).

Author Guidelines for resubmitted manuscripts

Papers that have been identified as having potential, but where extensive revision is required (often involving a restructuring of the paper, collection of new data or new analyses) may be given a decision of reject with resubmission permitted. In these cases, authors will be offered the opportunity to resubmit their paper as a new submission.

When submitting a resubmission, you must include a response to the original decision. Once re-submitted the manuscript will receive a new number and will be returned to the original associate editor for further consideration. The paper will go through the same peer review process as any new submission and authors should expect resubmitted papers to re-reviewed.

Resubmitted papers may be rejected if editors are not persuaded that the paper fits the scope and standards of the journal.

The option to resubmit on ScholarOne Manuscripts expires after 6 months. If you need this extended, please contact the editorial office.

Resubmission process

To submit a resubmission log in to your ScholarOne Manuscripts Corresponding Author centre. Click the "[Manuscripts with Decisions](#)" link. For papers with resubmission permitted, there will be a lilac button inviting you to 'Click here to submit a revision' next to the manuscript details.

Follow the resubmission process which is similar to the original submission process. Many of the fields will be populated with information from your original submission. Check each stage updating any changes that are required.

Although the paper will be allocated a new number, details of your original submission will be available to the editors.

Please remember to provide a detailed response with a point by point explanation of how you have addressed the comments made by the editors and reviewers on the original version of your paper.

Review

Once the editor handling the resubmitted paper has considered your new paper it is likely that your paper will be sent for further review. This may involve reviewers who commented on the original paper or new reviewers may be asked to look at the paper.

Decision

If the new paper has not been re-worked to the satisfaction of the editor, it may still be rejected. If the concerns with the original version of the paper have been addressed then it is likely that further revisions will be requested ultimately leading to acceptance for publication in Functional Ecology.
